

Vaccine Administration
Management System

VAMS Jurisdiction Users,

Starting Monday, January 11, CDC's process for reporting data through the [COVID Data Tracker](#) will change.

Until now, CDC has been conducting manual data reconciliation of data in VAMS and the data lake. This was necessary in large part due to issues with VAMS data that prevented it from moving into the IZ Data Lake. Starting Monday 1/11, CDC will streamline the process and use only data sent to the Immunization Data Lake for reporting to COVID Data Tracker, which may result in changes to the data displayed for your jurisdiction.

The VAMS integration team is working directly with jurisdictions that have VAMS data issues that need to be rectified (e.g., missing clinic ID). However, hybrid VAMS jurisdictions who are reporting data to the Data Clearinghouse via their IIS will need to validate that VAMS data is being reported correctly. If you need assistance, contact Stein Esser (stesser@deloitte.com) from the VAMS integration team.

Thank you,

VAMS Operations Team
